

Revision Guides

We recommend that students look at the material produced by Pearson. Pearson is the exam board that we use (sometimes commonly referred to as Edexcel), and so the material produced by them is created by the same people who have input into the content on the exams and in their specification etc.... They produce lots of material to help students and some of this has already been purchased by students at school. If you haven't purchased this material and would like to then please see Mr Milnes or your Maths teacher and they will point you in the correct direction. The material that we think is most useful is the revision guide, the workbook, the revision cards and the ten-minute tests that are shown below.

Please do look at their website if you want more information on this material, but remember please do speak to Maths staff in school if you want to get them. <https://www.pearsonschoolsandfecolleges.co.uk/secondary/Mathematics/11-16/revise-edexcel-gcse-maths/buy/>

Pearson also do a free App that anyone can download or use. Of course, this does dovetail with the resources above but you don't need to have them to use the app.

It can be found for Android at Google Play just search for "Pearson Revise"

It can also be found for Apple at the App Store again just search "Pearson Revise"

One of the most effective ways to practice Maths is to complete questions and apply your knowledge and understanding to problems. From this you can then see what you are good at and what you need to practice and develop further. We have several past papers that are available on our website and these are listed below.
